

## **DenyAll i-Suite certified by French IT security agency**

*DenyAll announces that the French national security agency (ANSSI, Agence Nationale de Sécurité des Systèmes d'Information) has granted i-Suite, its first level security certification (CSPN, Certification de Sécurité de Premier Niveau). i-Suite is the next generation application firewall from BeeWare's acquisition by DenyAll in May 2014. Public and private organizations can reinforce their security in the context of current modern threats, and especially vital organizations (OIV, Opérateurs d'Intérêt Vital).*

### **i-Suite 5.5, second French WAF certified by ANSSI**

After the certification of DenyAll's rWeb application firewall in July 2013, i-Suite version 5.5 – previously developed by BeeWare – obtains this certification. As the outcome of series of tests performed by Oppida, an assessment center authorized by ANSSI, the agency estimated that the software complies with its security goal and validated the efficiency of its security functions. This certification rewards continuous efforts of innovation and quality investments on the i-Suite software.

Dedicated to securing Web applications and services with a strong value-added on access management, i-Suite is used by organizations of all sizes to protect transactional websites (e-banking, administration, support, e-commerce), critical applications (webmail, HR, ERP) and web services (automated data transits between partners).

### **French alternatives**

The quality of i-Suite's security features is necessary to cope with modern threats, in the context of increasing attacks targeting national interests and large cyber-espionage.

“This ANSSI certification crowns the efforts held by BeeWare to have the i-Suite excellence recognized”, as Jacques Sebag – DenyAll CEO – explains. “DenyAll is the only software vendor specialized in application security able to provide certified and qualified products”.

While American vendors and cloud providers cooperate with American agencies, the French security solutions provide a serious alternative for all organizations and companies wishing to avoid US Patriot Act application, as well as promoting European innovation and leadership.

### **Administration and vital organizations awareness**

DenyAll pursues its efforts, within the Hexatrust association and in collaboration with ANSSI, in order to raise French buyers' awareness to the existence of best-of-breed French solutions protecting IT infrastructures against modern attacks and government espionage.

### About DenyAll

DenyAll is a European software vendor, an expert in next generation application security. Building on 15 years of experience securing web applications and services, the company keeps on innovating to meet the needs of organizations of all sizes, worldwide. Its products **detect** IT vulnerabilities, **protect** infrastructures against modern attacks targeting the application layer and **connect** users to the applications which allows them to create and share information. The company leverages an ecosystem of value-added resellers, outsourcers, hosters and cloud players. A member of Hexatrust, the association of French IT security vendors, DenyAll partners with other vendors to deliver innovative, integrated solutions.
