

WEBINAR

Tuesday April 10, from 11:00 to 12:00 CET

Update on “Man-in-the-Browser” threats and the Client Shield solution

Security experts Deny All and Promon are alerting organizations on an alarming evolution of “Man-in-the-Browser” attacks, such as Zeus et SpyEye. These tools let hackers capture sensitive corporate data exchanged via Outlook Web Access, and similarly sensitive Personally Identifiable Information stolen from e-Commerce and e-Banking sites. During next Tuesday’s webinar, Deny All and Promon experts will provide an update on the recent evolution of these threats and what can be done to effectively protect applications and sensitive data.

Webinar Content

- How “Man-in-the-Browser” trojans, keyloggers and spyware are becoming mainstream threats
- Why traditional anti-virus and endpoint protection systems are not enough
- What you can do to prevent your OWA and transactional sites from leaking sensitive data

This Webinar will be of interested to both decision makers and administrators.

Deny All “CTO Talk” Webinar

Tuesday, April 10, from 11:00 to 12:00 am CET, presented by:

**Renaud Bidou, Deny All CTO,
Tom Lysemose, CEO and founder of Promon.**

Through a partnership with Promon, a Norwegian start-up, Deny All proposes **Client Shield**, an optional module of rWeb4, its Next Generation Web Application Firewall. **The solution effectively protects Web applications against data theft, by controlling the execution of the connecting browser, blocking any attempt by Zeus or Spyeeye malware to insert themselves into the process and capture data.** Without actually removing the malware on the remote devices, Client Shield protects OWA and eBanking applications against the risk of sensitive data leaking to botnet command & control centers.

To participate, please respond to this email or fill the form on Deny All’s web site:

Note that Deny All’s other upcoming Webinars this quarter are:

| Date | Subject |
|-------------|--|
| May 22 | Take control of your application security policy with DAMC |
| June 5 | sProxy 4.0: The first “Plug & Play” Web Application Firewall |
| June 12 | rWeb 4.0: the Next Generation Web Application Firewall |
| June 19 | rXML 4.0: Best-in-class firewall for Web Services and SOA applications |
