

## Deny All flesh out again rWeb with the integration of a penetration test unique on the market!

*In 2010, Deny All, European leader in the protection and acceleration of Web applications, XML and FTP, successfully launched rWeb 4.0, the latest version of its security solution for Web applications / XML. Always at the forefront of innovation, Deny All is now offering a new option called Edge, a penetration test.*

CIOs are increasingly warning about the security levels of their infrastructure and Web applications are not immune to the trend. In 2009, on all identified vulnerabilities, **63% were from Web applications.**

Two types of evaluation of safety levels coexist on the market today : the automated audits, SaaS or not, and in manual audits performed by consulting firms. But both models have their limitations and propose or use tools that do not match the complexity of Web applications.

**The penetration test Deny All Edge now offers a unique evaluation model on the market.**

### Edge, how it works ?

Upstream Edge simulates attacks that could suffer the applications tested. Web applications are well tested by the automatic scan, issued in SaaS.

**Edge is clearly distinguished the two types of evaluation available on the market through:**

- **The management of false positives** (detected vulnerabilities that do not ultimately) **that are manually checked by an expert of Deny All**, and then confirmed as vulnerable or not.

- **A functional approach in addition to technical approach:** in contrast to existing solutions, **the scan of Deny All analyze the "business logic"**, that is to say that the functional vulnerabilities are highlighted, as such as the technical vulnerabilities. Example: a field that would use several times a promotional code supposed to be disposable!

The Edge scan delivers the results of faults detected in the form of **complete testing and screenshots.** The offer is optional for rWeb but is also available stand alone.

## About Deny All

Pioneer of WAF (Web Application Firewall), Deny All is now the European leader in the protection and accelerating Web applications, XML and FTP. Deny All provides solutions to large accounts globally, on all sectors. Its products, available as software or appliance, ensure protection, authentication and transaction acceleration on Internet, extranet and intranet. The Deny All solutions are easy to install and guarantee the highest level of protection against known and unknown attacks through a filter of HTTP(S), SOAP / XML and FTP(S). Today, Deny All solutions protect more than 30 000 web applications around the world.

With headquarters in Paris, Deny All is present in most European countries through local teams in Germany, Benelux, Spain and Nordic countries and around the world through its network of partners.
