High-Tech Bridge and DenyAll announce technology alliance in web application security

High-Tech Bridge and DenyAll unveil integration of High-Tech Bridge's ImmuniWeb® Application Security Testing Platform with DenyAll Web Application Firewall.

High-Tech Bridge, a leading web security company recently named "Gartner Cool Vendor 2017", and DenyAll, a Rohde & Schwarz Cybersecurity company and Europe's leading application security vendor, joined the efforts to combat skyrocketing cybercrime and defend corporate web applications and web services.

The announced technology integration enables joint customers to export vulnerability data from ImmuniWeb Portal and import it to DenyAll WAF in just a few clicks. Once imported, the vulnerabilities will be virtually patched by the WAF preventing any attempts of their malicious exploitation. This results in increased security and quicker turnaround time when new vulnerabilities are discovered.
High-Tech Bridge's ImmuniWeb® Application Security Platform provides companies and organizations with the most comprehensive web and mobile application security testing services (DAST, SAST and IAST). ImmuniWeb leverages High-Tech Bridge's award-winning machine learning and hybrid security testing technologies that reliably detect the most sophisticated vulnerabilities and contractually guarantee zero false-positives.

DenyAll Web Application Firewall is a comprehensive platform for authenticating users, evaluating their behavior in context and protecting web applications, APIs and Web Services against attacks attempting to exploit vulnerabilities. Unlike most WAFs, the DenyAll product is both easy to use and powerful, thanks to a unique workflow-based approach to configuring policy, application learning and automation features. It also stands out in terms of security effectiveness, by offering several security engines which can be chained together for optimal security.

High-Tech Bridge's CEO, Ilia Kolochenko, says: *"Vulnerable web applications represent a continuously growing risk to companies and organizations from all over the world. Millions of user records and gigabytes of personal data are breached every day in sophisticated attacks targeting websites and web applications. The alliance with DenyAll brings a reliable, simple and cost-efficient application security solution. Our technologies perfectly complement each other, bringing unbeatable effectiveness and ROI to our customers."*

DenyAll's CTO, Vincent Maury, adds: *"We are happy to partner with High-Tech Bridge to deliver better application security to customers worldwide. ImmuniWeb's machine learning capabilities combined with the ease of administration of the DenyAll Web Application Firewall platform is a winning combination".*

About DenyAll
DenyAll, a Rohde & Schwarz Cybersecurity company, helps organizations go digital by ensuring user interactions are seamless, yet secure. DenyAll's cloud services and appliances simplify the job of security and DevOps teams throughout the software development lifecycle, as they seek to deliver a safe digital environment. They help identify, prioritize and patch vulnerabilities. They simplify and strengthen user access to applications, wherever people connect from and wherever applications are located. They also block attacks targeting web applications, the APIs and web services powering mobile apps, by evaluating user behavior in context to respond appropriately. With DenyAll's next generation application security tools, ensure your users enjoy a secure digital experience.

About High-Tech Bridge
High-Tech Bridge is a leading web security company, currently serving customers from over 40 countries. High-Tech Bridge's application security testing platform ImmuniWeb® allows companies and financial institutions to monitor, detect, mitigate and prevent risks and threats to their web applications in a simple and cost-effective manner. ImmuniWeb leverages a hybrid security testing approach and machine learning technology for intelligent automation of web vulnerability scanning, significantly reducing human time required for advanced web security testing. Complemented by human intelligence, it detects the most sophisticated web application vulnerabilities and guarantees zero false-positives. After a strategic partnership between High-Tech Bridge and PwC, ImmuniWeb became a part of PwC´s Threat and Vulnerability Management (TVM) Framework for web security testing. ImmuniWeb is the recipient of numerous cybersecurity awards for innovation and quality.
