

- + Application-layer attack prevention
- + PCI DSS Compliance, OWASP Top 10
- + Virtual Patching

## 10 REASONS TO CHOOSE DENYALL WEB APPLICATION FIREWALL

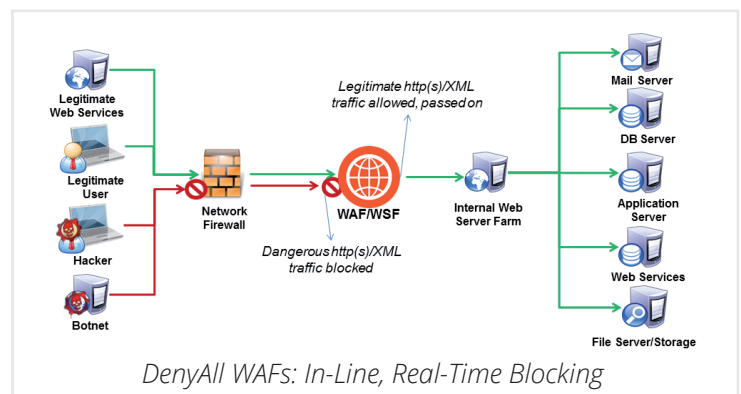

1. Time-tested security, **effective** against known and unknown attacks
2. The ability to combine negative & positive security with **user context** (time, location, device, etc)
3. A **productive** environment which lets administrators manage policy and optimize data flows visually using a proven workflow approach
4. The ability to **profile** web applications and learn how they work
5. The option to **replay** logged traffic to tune policy, perform forensics analysis
6. **Virtual patching** with DenyAll Vulnerability Manager and 3<sup>rd</sup> party vendors
7. APIs to **industrialize** deployments
8. The flexibility of managing both **virtual** and hardware appliances
9. Support for key **authentication** methods
10. The ability to **add features** with DenyAll Web Services Firewall (secure XML/JSON traffic) and DenyAll Web Access Manager (simplify user access/control)

## PROTECTING YOUR IT AGAINST MODERN THREATS

**Creating and sharing information** in confidence is essential to your organization. Whatever your business:

- You need to be able to **transact** with members of your ecosystem **using web and mobile apps**.
- You need to trust that your **data is safe, even in the cloud**.

That means making sure your applications are always **available and secure**.

**DenyAll Web Application Firewall protects your web-enabled IT** against denial of service attacks, defacement attempts, intrusion and data leakage risks. It has a proven track-record of blocking attacks targeting Internet facing sites, intranet and extranet applications, even databases queried by mobile apps.

You can use it to comply with regulations such as **PCI DSS**. It enables you to **optimize and accelerate your corporate data streams**, to improve the level of control your team has over your applications, how they are being used to access, create and share information.

## KEY FEATURES

### Administration

- **Visual policy & traffic control** with an intuitive, powerful workflow approach.
- **App discovery & profiling, fingerprinting** to identify & suggest preconfigured security policies.
- **Log replay** for policy testing & forensics analysis.
- **Virtual patching**, integration with DenyAll Vulnerability Manager and others vulnerability scanners through High-Tech Bridge's ImmuniWeb®.
- **Central provisioning**, monitoring and reporting on multiple devices.
- **Hardware Security Module (HSM)**, to safeguard and manage digital keys for strong authentication and to provide cryptoprocessing.

### User Authentication

- **Multiple methods supported:** Radius, Kerberos, LDAP, NTLM, forms, HTTP basic, SAMLv2, OpenID Connect and Oauth.

### Web Application Security

- **Reverse proxy security**
- **SSL termination and off-loading**
- **ICX engine combines negative policy & positive security** (app learning and white listing).
- **100+ preconfigured filters** including URL manipulations & data rewriting, anti-DoS, anti-Bots, etc.
- **Advanced security engine** to prevent app -logic attacks without signature basis.
- **Pooling mode** to prevent any connection to be initiated from Internet or the public DMZ to the protected network zones.

### Platform

- **Deployment on physical or virtual appliances.**
- **Reverse proxy clustering and load balancing** to ensure high availability and redundancy.
- **Secure XML & JSON traffic** with DenyAll Web Services Firewall extension.

## ABOUT DENYALL

DenyAll is a software vendor, expert in application security. For 15 years, we have been helping demanding customers secure their web applications and services. Our products detect IT vulnerabilities, protect infrastructures against modern attacks targeting the application layer and connect users to the applications which allows them to create and share information. In 2017, DenyAll was acquired by Rohde & Schwarz Cybersecurity.

## Web Application Acceleration

- **Caching in memory (RAM)**
- **Compression**
- **Server load-balancing**
- **HTTP/2 support**
